

ML Assignment - 1

Question-1

Question - 1

Given

$$\begin{aligned} x_1 &= (1, 2, 0)^T & y_1 &= +1 \\ x_2 &= (1, 2, 2)^T & y_2 &= +1 \\ x_3 &= (1, 0, 2)^T & y_3 &= -1 \end{aligned}$$

$$w_0 = (0, 6, 6)^T$$

$$\text{Sign}(w^T x_i) = y_i$$

① $\text{Sign}([0, 6, 6]^T [1, 2, 0]) = +1$

$$\text{sign}(0 + 12 + 0) = +1$$

$$\text{sign}(12) = +1$$

So, $\text{sign}(w^T x_1) = y_1$ ✓ satisfied

② $\text{Sign}([0, 6, 6]^T [1, 2, 2]) = +1$

$$\text{Sign}(0, 12, 12) = +1$$

$$\text{sign}(24) = +1$$

So, $\text{sign}(w^T x_2) = y_2$ ✓ satisfied

③ $\text{Sign}([0, 6, 6]^T [1, 0, 2]) = -1$

$$\text{sign}(0, 0, 12) = -1$$

$$\text{sign}(12) = -1$$

$\text{sign}(w^T x_3) = y_3$ ✗ not satisfied

① weight vector : $w = w + y_3 x_3$

$$(-1, 0, 1) + (-1, 0, 2) = (0, 0, 3) + (-1, 0, 2)$$

$$(-1, 0, 1) + (-1, 0, 2) = (0, 0, 3) + (-1, 0, 2)$$

$$(-1, 0, 1) + (-1, 0, 2) = (0 + (-1), 0 + 0, 3 + 2)$$

$$\checkmark w = (-1, 0, 5)$$

$$\text{sign}(w^T x_3) = (-1, 0, 5) (1, 0, 2)$$

$$(-1, 0, 5) (1, 0, 2) = (-1 + 0 + 10)$$

$$\text{sign}(+7) = -1 \neq +7$$

$$\text{sign}(+7) = -1 \quad \times \text{ Not satisfied}$$

② weight vector : $w = (-1, 0, 5) + (-1) (1, 0, 2)$

$$(-1, 0, 5) + (-1) (1, 0, 2) = (-1, 0, 5) + (-1, 0, -2)$$

$$(-1, 0, 5) + (-1) (1, 0, 2) = (-1 + (-1), 0 + 0, 5 + (-2))$$

$$\checkmark w = (-2, 0, 3) \quad \cancel{w = (-1, 0, 3)}$$

$$\text{sign}(2) = -1 \quad \times \text{ Not satisfied}$$

$$\text{sign}(w^T x_3) = (-2, 0, 3) (1, 0, 2)$$

$$= (-2 + 0 + 6)$$

$$\text{sign}(4) = -1 \quad \times \text{ Not satisfied}$$

weight vector = $w \in \mathbb{R}^3$

$$(1, 0, 1) \cdot (-2, 6, 2) + (-1) \cdot (1, 0, 2)$$

$$(1, 0, 1) \cdot (-2, 6, 2) + (-1) \cdot (1, 0, 2)$$

$$(1 \cdot -2) + (0 \cdot 6) + (1 \cdot 2) + (-1) \cdot (1 \cdot 1 + 0 \cdot 0 + 2 \cdot -2)$$

$$(1 \cdot -2) + (0 \cdot 6) + (1 \cdot 2) + (-1) \cdot (1 \cdot 1 + 0 \cdot 0 + 2 \cdot -2)$$

$$\text{Sign}(w^T x_3) = (-3, 6, 0) \cdot (1, 0, 2)$$

$$\text{Sign}(w^T x_3) = (-3, 6, 0) \cdot (1, 0, 2)$$

$$(1 \cdot -3) + (0 \cdot 6) + (0 \cdot 0)$$

$$\text{Sign}(-3) = -1 \checkmark \text{ satisfied}$$

So,

$$\text{Sign}(w^T x_1) = y_1 = \text{Sign}(12) = +1$$

$$\text{Sign}(w^T x_2) = y_2 = \text{Sign}(24) = +1$$

$$\text{Sign}(w^T x_3) = y_3 = \text{Sign}(-3) = -1 \checkmark$$
